Towards clean vehicles – the future of the internal combustion engine

Oliver Lah (Wuppertal Institute)
Transport and Climate Change Week Berlin
27.09.2018
What has changed after Dieselgate?
What does that mean for climate change?
What role are different vehicle technologies playing in the short and long-term future of mobility
What is the interplay of different policy interventions, on fuel economy and emissions standards, electric vehicles and urban mobility?

Towards clean vehicles – the future of the internal combustion engine
Towards Clean Vehicles

- **The Future of Internal Combustion Engines**
  - Martin Lange (UBA)
  - David Rubia (UN Environment)
  - Maurizio Maggiore
  - (European Commission)
  - Anders Berger (Volvo Group)
  - Eveline Prado Trevisan, Belo Horizonte, Brazil

- What is the interplay of different policy interventions, on fuel economy and emissions standards, electric vehicles and urban mobility?
- How can international cooperation help in the transition to low-carbon transport?
- What role are different vehicle technologies playing in the short and long-term future of urban mobility?
- How to design fuel economy and emissions standards that actually work?
- What can cities do to shape the future of vehicle technologies?
- How can levels of government better coordinate their actions?
